Crystalite Bohemia s.r.o. is a company that was founded in October 2009 and currently owns two manufacturing plants. The first is a glassworks in Světlá nad Sázavou with a fully automated production of both beverage and decorative glass (founded in 1967), while the second is the Květná glassworks (founded in 1794) located in the village of Strání, in which glass is hand made and decorated using a variety of different techniques to this very day. The company now employs over 900 people in two factories and generates annual sales reaching close to EUR 39 million. Its products are exported worldwide to over 82 countries.

For many years, environmentally friendly lead-free Crystalite glass has been used for the production of Crystalite Bohemia's entire product portfolio. Since 2016, titanium has been added to the glass. This ensures a greater degree of durability of the final product. This glass has similar superior qualities as Czech crystal, as well as a long service life and can also be washed in a dishwasher without any risk of it turning grey. Products made using this material are stronger, more resistant to a larger number of dishwasher cycles, while maintaining an excellent light refraction. The Crystalite Bohemia glassworks is the only one of its kind in the Czech Republic and the second one in Europe to use titanium glass for the production of beverage glass.

Nowadays both plants support each other synergistically. In addition to manufacturing, the commercial and administrative facilities that provide support for the entire company are located in Světlá. The Květná glassworks, decorate, engrave or grind both beverage and decorative glass made in Květná, but also products produced on automated lines at the Světlá nad Sázavou plant.

Thanks to the installation of new modern automatic production lines, the annual capacity for beverage glass has increased to 55 million units.

Available decorations – more examples available at the end of the catalogue

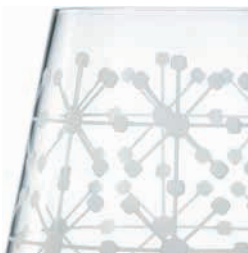

Clear pantograph

This technique uses the principle of etching glass that is not protected by a layer of wax. A product is first immersed into wax, left to cool down and then a pattern is engraved using panto or guilloche machines. The actual etching follows, producing a delicate pattern on the glass surface. Etching is often combined with painting.

Gold / platinum pantograph

Pantograph created decorations with gold or platinum details.

Clear engraving – diarit

Diarit is a method of machine created decorations. It uses a small diamond coated grinding wheel that engraves the desired decor under a stream of running water.

Gold / platinum engraving

Diarit created decorations with gold or platinum details.

Gold / platinum rim

Edges of glasses and pouring glasses decorated with a gold or platinum rim.

Giftware / Barware / Candelsticks / Stemware / Tumblers / Bottles & Jugs / Hand Made / Non Core To Us

We would kindly like to point out at our **"Order form"** which we have developed for you. It is easy and effective tool for ordering our products from our catalogue.

You can only fill up the intended quantities you want to order and our form will automatically calculate all the necessary figures for you e.g. total amount of your order, quantities, volume and weight.

In the form you may also see the percentage of filling up of the container size and many other important data. You can see the actual stock status of each articles and you may also find the nearest production date of the item planned in calendar weeks marked by "X" sign. (if the "X" mark is red coloured it signifies the capacity is not available anymore).

We believe you will find this form useful because it may save a lot of time and communication having all the packaging data right away.

It will also help us to speed up the issuing of order confirmations, proforma invoices etc.

As a small bonus we are offering 0.5% additional discount for placing the orders by using this form.
