PACKAGING OF PRODUCTS .....	80
ORDER FORM .....	80

Traditional products which are blown into wooden molds. These perfect shapes emerging in the hands of master glassmakers are labeled HAND-MADE.

Since 2016, titanium has been added to the glass. This unique formula gives our giftware items crystal clear shine.

Protected by RCD | Nr.

Dear business partners,

I would like to thank you for your trust and helpful cooperation; it is truly heartwarming for both me and my colleagues, and it implies our commitment to continuously improve our service as well as our products. I believe that this year's innovations which I want to present to you will impress you as milestones in our existing cooperation. Let me take the liberty to inform you about major news from our Company.

Enrichment of our glass melt with titanium represents a major breakthrough in the production technology. By doing so, we have significantly improved the quality of our products as well as substantially increased abrasion resistance, which is a crucial parameter, in particular for beverage glassware. By adding titanium, the light refractory index has also improved considerably, which means that our products feature an even brighter crystal glass. We have decided to use the new, more resistant and higher-quality glass melt also to manufacture decorative items. I would like to point out that we are the only crystal manufacturer in the Czech Republic who uses this advanced technology.

Another technological innovation is evident in the new collections designed by our talented design team and we are pleased to continue our cooperation with Simon Moore. I can already promise you now that additional collections will be introduced to the market as soon as possible.

We can do many things, but the willingness of our partners to cooperate with us is always the most important aspect. We strive to understand the challenges they face in their markets. Every country is somewhat different in its nature, but the main principle of cooperation remains always the same for us – open and fair exchange of information provides the basis for a long-lasting partnership.

If this runs smoothly, even occasional problems can be easily overcome. They occur on our part from time to time, namely in situations when some of our plant installations do not work correctly. Such situations cannot be completely avoided. And I am delighted to inform you, during 2016, we purchased two more modern glass lines for over 11 million EUR. Consequently, our daily production capacity has increased by more than 100 thousand pieces and I can already promise you additional new collections of glasses and glass tumblers that will start rolling off these advanced installations. So I thank you for your confidence; and we look forward to continuing what we began seven years ago.

Warmest regards,  
Lubor Cerva

## Crystalite Bohemia

The Czech company Crystalite Bohemia s. r. o. was established in October 2009 and today it owns two production plants. The first is a glass factory in the town of Svetla nad Sazavou with fully automated production of beverage and decorative glass (the glass factory was founded in 1967) and the second is the Květná glass factory in the municipality of Strání (founded in 1794), where glass is still manufactured manually and is decorated by using various techniques. Currently, the company has around 1,000 employees working in the two production plants and generates an annual turnover nearing EUR 40 million. The company exports its products to more than 82 countries the world over. The sole owner of Crystalite Bohemia is Mr. Lubor Cerva, a Czech entrepreneur and investor.

The entire range of products is manufactured with the use of an environmentally-friendly lead-free Crystalite glass melt. Since 2016, on automated lines in Svetla nad Sazavou, this glass melt has been enriched with titanium, which provides the final products with greater resistance, extends their durability and underscores their crystal appearance. Crystalite Bohemia is the first glass factory in the Czech Republic – and the second in Europe – which uses a titanium glass melt in the manufacture of beverage glass.

Today, both plants work in synergy. Besides manufacturing, the Svetla nad Sazavou plant also accommodates the commercial and administrative base of the entire company, while the Květná plant focuses on decorations, engraving or grinding of both beverage and decorative glass not only from Květná itself, but also of glass that is made on the automated lines in the plant of Svetla nad Sazavou.

Every day, the two factories produce more than 148 tons of glass melt, making Crystalite Bohemia one of the world's largest glass factories producing beverage and decorative glass. The daily output of the factories is over 150,000 pieces of beverage glass and around 30,000 pieces of decorative glass.

## Glass factory Světlá nad Sázavou

The origin of glassmaking in the region of Světlá nad Sázavou dates back to as early as the late 16<sup>th</sup> century. The history of the glass factory in Světlá nad Sázavou starts in 1967, when the foundation stone was laid and when the construction of a new modern glass factory was started. The actual production began in 1970 and was primarily focused on manual manufacturing. In 1975, the introduction of automated production, i.e. machine glass blowing, brought a revolutionary change. Another important investment which allowed the glass factory to keep pace with its global rivals came between 1998 and 2000.

At that time, heavy presses were commissioned in the two newly installed melting units, making it possible to manufacture decorative items with a size of up to 45 centimetres and with a maximum weight of 5 kilograms. Decorative glass – primarily vases and bowls – started to be manufactured in these units on a large scale.

Currently, the glass factory in Světlá nad Sázavou runs 5 melting units with a daily melting capacity of 145 tons of glass melt, which constitutes roughly 150,000 pieces of machine blown glasses and glass tumblers and 30,000 pieces of gift items per day. The recent increase in the production of beverage glass has been mainly driven by the installation of two state-of-the-art automated lines L8 and L9 at the end of 2016 and a thorough modernization of line L5 in the previous year.

## Glass factory Květná

The Květná glass factory is the longest operating glassworks in our territory. It was founded in 1794 by the Duke Alois Lichtenstein. Focusing at first on the production of domestic glass tableware and plate glass, the factory was acquired in the mid-19th century by the Austrian businessman Emanuel Zahn, who introduced the production of fine crystal glass with grinding and engraving decorations. It was him who brought experienced glassworkers, who arrived with new techniques and manufacturing methods. This resulted not only in a rapid increase in the quality of products, but also in an extension of the product range and modernization.

In 1894, the name of the glass factory changed and the local name Květná (Blumenbach) began to be used. This name shortly became a hallmark of quality and was much sought after in the world markets. The company Zahn & Göpfert established display rooms and disposition warehouses in London, Paris, Berlin and Hamburg and showed its products at the Leipzig world expo. As the second glass factory in Europe, Květná introduced decoration by glass etching as early as in 1897. Glass tableware with various decorations was then exported to the U.S., Africa, Australia, Egypt, Scandinavia, Austria, Germany and Switzerland. In January 2011, the Květná plant was fully integrated into the Crystalite Bohemia group and since then it has been significantly supporting the factory in Světlá nad Sázavou through its own manual production and decoration techniques and ranks among leading global glassmakers, offering a wide and globally unique array of decorations and colour glass melts in sixteen basic colour shades.

We would kindly like to point out at our "Order form" which we have developed for you. It is easy and effective tool for ordering our products from our catalogue.

You can only fill up the intended quantities you want to order and our form will automatically calculate all the necessary figures for you e.g. total amount of your order, quantities, volume and weight.

In the form you may also see the percentage of filling up of the container size and many other important data. You can see the actual stock status of each articles and you may also find the nearest production date of the item planned in calendar weeks marked by "X" sign. (if the "X" mark is red coloured it signifies the capacity is not available anymore).

We believe you will find this form useful because it may save a lot of time and communication having all the packaging data right away.

It will also help us to speed up the issuing of order confirmations, proforma invoices etc.

As a small bonus we are offering 0,5% additional discount for placing the orders by using this form.
